

IHC Compass HIIN Data Reporting

Chartered hospitals are expected to:

- Complete work plan to begin reporting
- Select from menu of measures to comply with submission of at least one outcome and one process measure for each focus area that applies to the hospital services
- Confer NHSN rights for all applicable measures
- Submit meaningful data on ADE process measures for blood glucose, Narcan and INRs
- Select from menu of optional focus areas (antimicrobial stewardship, hospital worker safety, imaging)

IHC HIIN Data Sources

Statewide Databases

Where available, IHC will process monthly data to return point-in-time monthly data points utilizing available submitted information submitted on or around the 20th of each month. These data will be grouped utilizing 1) the AHRQ (Agency for Healthcare Research and Quality) Quality Indicator Grouping methodology, 2) existing relevant codes to identify records with ICD-10 codes identifying numerators and 3) patient linking capabilities to identify readmissions. Facilities where statewide databases are not accessible, see Self-Reported below.

National Safety Healthcare Network (NHSN)

Hospital must confer rights for all applicable measures to the Iowa Healthcare Collaborative. On or around the 20th of each month, IHC will download updated NHSN information for all HIIN hospitals. These data are uploaded into the HIIN database for HIIN contacts to use for process improvement.

Self-Reported

Measures requiring data mining/abstraction may utilize sampling methodologies. See Improvement Advisors for options. Monthly data are due 45 days after the end of a month. Access the HIIN Data Collection Tool through a secure login to input hospital information. Reports will immediately display updated information.
